Coil Racking Systems

...FOR QUALITY, EFFICIENCY AND SAFETY

Coil racking is an excellent method for storing cable or other material that is dispensed from a reel. This type of racking stores coils of varying sizes secured in specially designed spindle brackets and is suitable for a range of warehouse, industrial and retail environments.

Our expertise and knowledge ensures that your coil storage racking is designed and fabricated to the highest standards and specification.

- The spindle bracket design ensures product is securely located and easily removable.
- Single or double sided versions are available.
- Each system designed specifically to suit your application.
- Spindle Brackets are adjustable vertically to carry varying diameters of product.
- The stability of our design enables de-coiling of product direct from the racking.

Coil Storage Racking

... for Efficiency & Versatility

It is vital for all companies to constantly find ways to gain an edge over the competition, by reducing costs, increasing capacity and generally improving efficiency.

We can help you to achieve these goals and much more, with our Coil storage Racking system combined with our expertise in storage and logistics enables us to provide the optimum solution.

Typical examples of materials stored on reels:

- Metal coil and cabling
- Paper and fibre products
- Rubber and plastic goods
- Carpets and other floor coverings

Our coil storage racks are high quality, bespoke products, designed and manufactured to your individual specification.

Features and benefits

Stock is easily accessible to reduce handling, facilitate stock rotation and improve turnaround
